

# BUILT LOGIC

AI FEASIBILITY STUDY

## Find out whether AI pays back in your business, before you build anything.

For established UK construction and built-environment companies.

Whether AI is worth building here, which workflow to start with, and the controls that keep your people in charge. You keep the findings either way.

---

### From £1,997 + VAT

From £1,997 + VAT for one company or one defined business unit.

Paid in full on booking.

We confirm scope and fit before you pay anything.

Pay by card, invoice or purchase order.

The full study fee is credited against your first Build if you proceed within 14 days of delivery.

---

### What we review, and what we need from you

How the in-scope work runs today

The volumes, time and cost behind it

The systems and documents involved

Where the risks and sign-offs sit

One kickoff session with whoever owns the decision

Short conversations with the two to four people who run the work

A short session with whoever holds the numbers

Sample documents and reports

A walkthrough of your key systems

We don't need system credentials: the walkthrough or read-only view you agree is enough. No standing committee. Nobody pulled off live jobs for days.

### What arrives at the end

**The written study.** The opportunities worth pursuing, the order to build them in, the rough cost and payback against each, and where human sign-off stays. Every figure shows the inputs behind it.

**A one-page summary of the findings.** Built to be forwarded to your FD or board.

### Who it fits

Established UK construction and built-environment companies with real work flowing through: live jobs, real documents, a team handling them.

Not for sole traders or small owner-operator trade businesses.

The study doesn't include build work, software procurement or company-wide AI strategy beyond the unit we agree. It tells you what to do; the build is a separate decision.
